

SEED ROUND · OCTOBER 2026

Tidewatch

Know your boat is fine without driving to the marina.

Boats sink at the dock

- Most insurance losses on recreational boats happen while the boat is moored: bilge pump failure, shore-power loss, lines chafing in a storm.
- Owners visit every few weeks. Marinas walk the docks once a day.
- Existing monitors are \$600 of hardware plus a \$40 monthly plan, aimed at yachts; the 9 million boats under 40 feet have nothing.

What Tidewatch does

- A \$149 sealed sensor: bilge level, battery voltage, shore power, GPS geofence, high-water alarm. Installs with two screws.
- Alerts to the owner and, with consent, the marina office, over cellular; no boat Wi-Fi needed.
- Marina dashboard: every connected slip on one screen, prioritised by risk.

MARINA PARTNERS

61%

OF SALES VIA MARINAS

Hardware sold at cost; revenue is the \$12 monthly plan. 14-month cohort retention 88%. Two insurers offer a premium discount for Tidewatch-equipped boats.

Business model

- Sensor \$149, sold at roughly cost.
- Subscription \$12 a month per boat, or \$99 a year.
- Marina plan: \$2 a month per slip for the dashboard, paid by the marina.
- Gross margin 76% on subscriptions.
- Marina channel CAC \$31 per boat; direct CAC \$88.
- Insurer referral programme started in July.

Market

- 11.8 million registered recreational boats in the US; about 2.1 million kept in a marina slip or on a mooring year-round.
- At \$144 a year per boat that is a \$300M serviceable market before marina dashboards and insurer channels.
- Europe and Australia roughly double it; we are US-only for now.

Competition

	Tidewatch	Siren Marine	Boat Command	Nothing
Hardware price	\$149	\$599	\$349	0
Monthly plan	\$12	\$40	\$25	0
Marina dashboard	Yes	No	No	No
Target boat	Under 40 ft	Yachts	Mid-size	

Team

- Sam Keller, CEO. Ran a 420-slip marina for six years; before that operations at West Marine.
- Ana Petrov, CTO. Embedded systems lead at a cellular IoT module maker; 11 years in low-power hardware.
- Dev Raman, Head of Partnerships. Insurance partnerships at Progressive's boat division.
- Team of 9 in Annapolis; contract manufacturing in Taiwan.

The raise

- Raising \$3M seed.
- Use of funds: 20,000-unit production run, marina sales team for Florida and the Great Lakes, insurer integrations.
- Goal: 25,000 active sensors and \$300k MRR by end of 2027.

Thank you
